Gil,
Below is a summary of NTS worker dose for 2008. Worker dose information for prior years is available on the DOE REMS website. The summary data for 2008 provides similar information as found in the published REMS reports. Let me know if you need anything further on this topic. -- Tom Enyeart, NNSA/NSO

Importance: High

Mark,
I met recently with one of the contractors working on the NTS Site-Wide EIS. It was a data request type of meeting, and one of the things they are looking for is NTS worker dose summaries for recent years. I referred them to the DOE REMS website which has summary reports through CY 2007. Could you please provide summary information for CY 2008? We should provide similar information as is available in the published REMS reports for previous years, specifically:

- Collective TEDE (person-rem) 5.452
- Number of monitored individuals with measurable TEDE 127
- Average measurable TEDE 43 mrem
- Percentage of collective TEDE above 0.5 rem 0% (max individual was 0.451 rem)

The requested date for receiving this information is 11/30/09. Thanks -- Tom
