Ms. Salley Lindsey  
DOE Public Reading Room  
Technical Vocational Institute  
Montoya Campus Library  
4700 Morris NE  
Albuquerque, NM 87123

Dear Ms. Lindsey:

Enclosed are copies of the letters received from stakeholders and members of the public regarding the Environmental Assessment (EA) for the *Transfer of the DP Road Tract to the County of Los Alamos, New Mexico* (DOE/EA-1184), along with copies of the Department of Energy's response letters to these parties, which have been assembled into a separate informational document. Please make this document available to the public.

If you have any questions concerning this document, please contact Dean Triebel, Document Manager, at (505) 665-6353. Questions regarding the Los Alamos Area Office National Environmental Policy Act (NEPA) program can be directed to me at (505) 667-8690.

Sincerely,

December 9, 1996

Mr. G. Thomas Todd  
Area Manager  
Department of Energy  
Albuquerque Operations Office  
Los Alamos Area Office  
Los Alamos, NM 87544

Dear Mr. Todd:

The Environmental Protection Agency (EPA) has reviewed the Environmental Assessment (EA) for a proposal to transfer land located along DP Road to the County of Los Alamos. Our review and comments are in accordance with Section 309 of the Clean Air Act and the National Environmental Policy Act (NEPA).

The EA documents baseline conditions at the site, anticipated impacts from the land transfer, and coordination with other resource agencies necessary to insure appropriate environmental compliance and to minimize environmental impacts.

Based upon the environmental assessment information, EPA has no objection to the implementation of the selected alternative.

Thank you for this opportunity to comment. If you have any questions, please contact me at 214/655-7451 for assistance.

Sincerely yours,

A handwritten signature in cursive script, reading "Michael P. Jansky", is written over the typed name.

Regional Environmental Review Coordinator  
U. S. Environmental Protection Agency  
Region 6  
1445 Ross Ave, Suite 1200  
Dallas, TX 75202-2733

Dear Mr. Jansky:

This responds to your December 9, 1996 letter commenting on the Pre-decisional Draft Environmental Assessment (EA) for the *Transfer of the DP Road Tract to the County of Los Alamos, New Mexico* (DOE/EA-1184). We appreciate the Agency's interest in the Los Alamos Area Office's (LAAO) National Environmental Policy Act (NEPA) program and thank you for commenting on the draft EA. The final EA reflects changes made to the text to address comments received from stakeholders. The Department of Energy (DOE) issued a Finding of No Significant Impact (FONSI) for this project and a final EA on January 23, 1997. Copies of the EA and FONSI are enclosed.

This NEPA decision was based on the consideration that there are no significant impacts to the human environment as a result of the proposed land transfer. DOE is aware of other issues associated with land transfers, and therefore, no land will be transferred from DOE ownership until these issues are discussed in a public forum. A public meeting to discuss future land transfer issues will be held on February 18, 1997, at LAAO, 528 35th Street, Los Alamos, NM, Room 100, from 6:00 p.m. to 9:00 p.m.

I appreciate both your effort in providing your evaluation of the draft EA and support of the LAAO NEPA program. If you would like further information regarding this project, please call Dean Triebel, Office of Environment and Projects, at (505) 665-6353. If you have any questions regarding our LAAO NEPA program, please call Elizabeth Withers, NEPA Compliance Officer, at (505) 667-8690.

Sincerely,

A handwritten signature in black ink that reads "G. Thomas Todd".

Our concerns are as follows:

**1. The EA needs more analysis on possible impacts of specific types of development that have been proposed.**

Although the land use for the tract has not been determined, different types of development may have vastly different environmental effects. For example, the risk of toxic spills or contamination, the rate of erosion and runoff, water resource demands, and impacts to wildlife or air quality will vary widely from one type or scale of development to another. The absence of specific development scenarios makes it extremely difficult for DOE to evaluate environmental impacts, or for the public to evaluate the EA.

NPCA believes that DOE should establish a policy right now regarding any potential land transfers, that policy being that environmental compliance will only be done when future anticipated lands uses are well-known and subject to some degree of specific evaluation. At the absolute minimum, the public needs more detailed information on the environmental impacts of specific types or options for development of the DP Road site, and other potential transfer sites. This information is critical, since there are watershed and human health concerns associated with the past use and proposed future development of the DP Road Tract.

While it is helpful to assess a worst case scenario such as an earthquake on existing LANL facilities near the DP Road Tract, it might be more helpful to analyze more likely scenarios involving uses such as heavy manufacturing and equipment, underground tanks, septic systems and the radioactive waste pipeline. It would be useful to show how any leakage, accidents or accelerated erosion could affect future employees, groundwater, canyon watersheds and habitat and downstream landowners.

For example, according to the EA on page 19, wastewater facilities at Bayo Canyon and White Rock are not operating at full capacity but there are "constraints at other parts of the system that limit the maximum amount they could process." The EA is silent on how different development scenarios would impact or exacerbate this situation. What levels of wastewater generation would stress the capacity beyond a safe operating margin?

Similarly, the EA mentioned possible contamination sites upstream in Los Alamos Canyon, radionuclides downstream and potential release sites (PRS's) on the DP tract itself. How would differing development scenarios increase or decrease the likelihood of problems occurring with these sites and materials?

Both DP and Los Alamos canyons are ephemeral streams that flow primarily in summer months during thunderstorms. The document mentions that riverine and palustrine

David J. Simon  
Southwest Regional Director  
National Parks and Conservation  
Association  
Southwest Regional Office  
823 Gold Ave., S.W.  
Albuquerque, NM 87102

Dear Mr. Simon:

This responds to your January 3, 1997 letter commenting on the Pre-decisional Draft Environmental Assessment (EA) for the *Transfer of the DP Road Tract to the County of Los Alamos, New Mexico* (DOE/EA-1184). We appreciate the Association's interest in the Los Alamos Area Office's (LAAO) National Environmental Policy Act (NEPA) program and thank you for commenting on the draft EA. The final EA reflects changes made to the text to address comments received from your office and other stakeholders. The Department of Energy (DOE) issued a Finding of No Significant Impact (FONSI) for this project and a final EA on January 23, 1997. Copies of the EA and FONSI are enclosed.

This NEPA decision was based on the consideration that there are no significant impacts to the environment or human health as a result of the proposed land transfer. DOE is aware of other issues associated with land transfers in general, and therefore, no land will be transferred from DOE ownership until these issues are discussed in a public forum. A public meeting to discuss future land transfer issues will be held on February 18, 1997, at LAAO, 528 35th Street, Los Alamos, NM, Room 100, from 6:00 p.m. to 9:00 p.m.

In your letter, you asked several questions and made some observations and comments that I would like to briefly address. For convenience, I refer to your comments by number in my responses presented below. Text locations referencing changes to the final EA document are indicated:

1. As you indicated in your letter, we have not analyzed the impacts of specific types of development options. There are many variations and evaluating each possible variation would be never ending and therefore is considered unreasonable. Instead, we have evaluated what we consider a reasonable bounding development scenario in consultation with the County of Los Alamos (County). The proposed development of the tract, as stated in the EA, is limited to either use by the County, development and use as a commercial or professional business park, or for light industrial business purposes. The effects of these uses are felt to be bounded by the analysis presented in the EA, including potential accident scenario effects analysis.

JAN 23 1997

Your comment about the wastewater system constraints are a concern of the County and their management of the development of the property. Their proposals for development of the DP Road tract consider this constraint. The limiting factors associated with the treatment system are the sizes of various pipes and lift station capabilities. These are items that could be changed out and corrected so that the system could function at a greater level if the County chooses to do so. This is not currently being considered by the County, however, due to the costs involved.

Your comment about possible contamination sites in Los Alamos Canyon was addressed in this EA through the evaluation of a bounding case scenario that contemplated covering the entire site with buildings and asphalted or concreted parking areas, thus maximizing the runoff potential. Potential Release Sites (PRS) on the tract will be cleaned up, if necessary, to the satisfaction of the regulatory agency before any disturbance of the PRS location is allowed by DOE per the transfer agreement. Similarly, a nearby site that has not been fully characterized will have to be fully characterized, and may have to be remediated, before any disturbance to the PRS buffer area is allowed. Additional text has been added to the approved EA regarding this issue in Chapter 4.1.4.

We appreciate your comments regarding establishing a policy in evaluating land transfers that might set certain areas off limits to post-transfer development. This type of evaluation will be incorporated in future land transfer discussions. For this particular EA, there is no need to establish such a policy, since there is no adversely affected habitat for threatened or endangered species within the DP Road Tract.

Your concern about the compatibility of uses for the DP Road tract was taken into consideration in the EA. The analysis in Chapter 4 of the EA discussed the compatibility and environmental consequences of the development on the affected environment. Changes to the type of activities allowed on the tract in the distant future would be subject to established County procedures that include public input and local, State, and Federal laws and regulations in effect at the time. It is not DOE's intent to limit the future use of the site after Technical Area 21 is vacated by Los Alamos National Laboratory operations (which is not proposed for the foreseeable future).

2. The EA assesses the consequences of the proposed action on the existing environmental setting, which includes Bandelier National Monument and U. S. Forest Service lands located several miles away. In the EA analysis, however, effects to these properties were considered but eliminated from further consideration because no identified direct, indirect or cumulative effects could be identified that impacted the human environment of those distant locations (Chapter 3, Table 3.1). If a proposal(s) for future land transfers is developed, it will have additional NEPA documentation to evaluate the consequences of that action(s). Depending upon the location of the property being considered, there may or may not be the need to analyze impact to the Monument or Forest Service properties.
3. Although DOE is not constrained to transfer property to the County under the Atomic Energy Act or the Atomic Energy Community Act, it is in the best interest of DOE and the County that it do so. To that end, and in light of our obligation to assist the County in

JAN 23 1997

its quest to become more self-reliant, we have proposed the transfer of the DP Road tract as it is adjacent to the heart of the commercial townsite area. It is not incumbent upon DOE to consider the entire universe of possible parties to whom the land could be transferred, or to consider such a broad range of future uses in making our decision, based on our need for action. In the broader sense, transferring land out of DOE management to a variety of recipients would be allowed under the Atomic Energy Act, and we agree that there may be many different interested parties involved in such a proposal for a variety of reasons and that these should all be considered in such an action, as appropriate.

I appreciate both your comments and your support of the LAAO NEPA program. I hope this letter, together with the accompanying changes made to the EA, has further clarified some of your comments regarding the proposed action. If you would like further information regarding this project, please call Dean Triebel, Office of Environment and Projects, at (505) 665-6353. If you have any questions regarding our LAAO NEPA program, please call Elizabeth Withers, NEPA Compliance Officer, at (505) 667-8690.

Sincerely,

G. Thomas Todd  
Area Manager

Homesteaders Association of the Los Alamos Plateau

RECEIVED  
LAAG - MAIL & RECORDS

1997 JAN -3 PM 2:23

January 2, 1997

Department of Energy  
Los Alamos Area Office  
528 35th Street  
Los Alamos, NM 87544

Attention: Mr. Triebel, EA Document Manager

Dear Mr. Triebel:

On behalf of my family and the residents of Northern New Mexico whom I represent and who are the original homesteaders and heirs to the lands proposed for transfer to the Los Alamos County, I would like to thank you for the opportunity to comment on the following document:

DOE-EA-1184, predecisional draft Environmental Assessment (EA) for the Transfer of the DP Road Tract to the County of Los Alamos, November 15, 1996.

In reference to the acceptability of this draft environmental assessment, I find the document to be deeply flawed, the terms of the studies incomplete, outdated, and self-serving. In the case of the bases for the transfer of the land to the County, the interpretation of commitments is distorted, misleading and heavily biased in favor of the County.

For the reasons stated below, the document fails to meet the minimum standards for a draft EA and will require correction, revision, and re-publication as a draft. This conclusion results not only from the internal deficiencies in the document itself, but also because it fails to address the true scope of the land transfer activity planned and that has already taken place.

It is obvious from the draft EA that the proposed actions discussed are actually part of a larger "master plan" which includes the transfer of many acres of land at various laboratory sites. These actions are clearly interdependent and must be analyzed together in order to properly take into consideration their cumulative and long-term effects. Therefore, all actions involved in the "master plan" must be analyzed in one EA. Since there has never been "a broad environmental impact statement" for the overall "master plan" for these interrelated actions, this piecemeal approach of separate EAs is improper.

Itemized below, I am providing general and specific comments cross referenced to the sections of the EA. These comments serve to illustrate only a few of the many inadequacies of the EA. I have not commented on all of the deficiencies due to time constraints and volume of deficiencies found.

**General Comments:**

1. RE: Cover page to EA dated November 15, 1996-the second paragraph states that the *Land and Facility Use Policy* for returning lands to public use is for ensuring public participation. The Citizens Advisory Board (a forum for public participation) has forwarded to the DOE a recommendation for considering the homesteaders claims to the lands proposed for transfer. However, as of this date the DOE has been slow to acknowledge and respond to these recommendations. This lack of response from the DOE does not ingratiate the DOE into the public trust.

Action Requested: Please respond to the CAB's recommendations.

2. RE: Cover page to EA dated November 15, 1996-the fourth paragraph states that the DOE considered but dismissed from further evaluation the alternative to "sell the land to a non-government buyer". However, in contradiction under section 2.1 on page 9 of the EA the DOE makes allowance for conveying the tract of land to other parties for development and use as a commercial or professional business park. This action sidesteps allowance for considering the homesteader's claims and allowing them access to participate in development ventures.

Action Requested: Please identify if in fact the proposed action expressly prohibits the County from selling or otherwise leasing the land to private developers.

3. RE: Cover page to EA dated November 15, 1996-the third sentence on page two of the cover page states that the DOE does not believe a public meeting is necessary. The fact that the comment period was extended, because of much insistence from the public, is not reason enough not to have a public hearing. Many members of the public are unable to submit written comment therefore the omission of a public hearing denies a large segment of the public their right to public participation in the comment process.

Action Requested: I urge you on behalf of my constituency and the general public to hold a public hearing and comment period.

4. RE: Page 3 of the EA-the proposed transfer of land is for future business park or light industrial development purposes. However, the feasibility study results have not been made available to the public for their review in conjunction with the EA.

Action Requested: Please provide a copy of the feasibility study for the research park.

5. RE: Page 3 second paragraph of the EA-the forth sentence identifies that the decision to be made by the DOE in this case is whether or not to transfer its ownership of the subject land tract by deed. The DOE has not shown that they hold ownership to the land regardless of the fact that this land was taken under the War Powers Act. The procedural process under which the land was taken is being challenged and pending legal action. If in fact the DOE can deed the land to the County, then the land can also be deeded to the homesteaders. In latter part of 1995, the DOE Albuquerque Office stated that the Corps of Engineers is conducting a title search to determine the ownership of the lands. This title search was to take 9 to 12 months to complete.

Action Requested: Please provide appropriate documentation that would show that the DOE holds ownership of the land proposed for transfer. Also, provide a status of the Corps title search and findings to date.

6. RE: Page 25 of the EA-paragraph 1 of section 3.13, Environmental Justice acknowledges the need for identifying and addressing the possibility of disproportionately adverse health and socioeconomic effects of Proposed Actions on minority and low-income populations. However, DOE is in the process of finalizing procedures for implementing the requirements of Executive Order 12898. Additionally, the DOE contends that the analysis of environmental justice in this EA is not intended to establish the direction of DOE 's future procedures implementing the Executive Order.

Action Requested: Please explain how the DOE can justify proceeding with the proposed action without knowing the results of the socioeconomic effects of the proposed action on the surrounding minority population. Also, please explain on what basis the DOE can disregard the application of the analysis results on future actions. Additionally, I request a copy of the results of the socioeconomic analysis as soon they become available.

#### Specific Comments:

1. RE: Page 1 of the EA-the second paragraph asserts that economic development will accelerate within the County through employment opportunities offered subsequent to the attainment of additional property ownership and its following use.

Action Requested: Please provide a copy of the model and results of the analysis used to make this assertion. Also, identify the distributional equity to the Northern New Mexico Region.

2. RE: Page 1 of the EA-third paragraph discusses a "sliding scale approach" for determining the potential of creating adverse environmental effects as a result of the proposed action.

## Department of Energy

Albuquerque Operations Office  
Los Alamos Area Office  
Los Alamos, New Mexico 87544

JAN 23 1997

Joe Gutierrez, President  
Homesteaders Association of  
the Los Alamos Plateau  
334 Kimberly Lane  
Los Alamos, NM 87544

Dear Mr. Gutierrez:

This responds to your January 3, 1997 letter commenting on the Pre-decisional Draft Environmental Assessment (EA) for the *Transfer of the DP Road Tract to the County of Los Alamos, New Mexico* (DOE/EA-1184). We appreciate your interest in the Los Alamos Area Office's (LAAO) National Environmental Policy Act (NEPA) program and thank you for commenting on the draft EA. The final EA reflects changes made to the text to address comments received from your organization and other stakeholders. The Department of Energy (DOE) issued a Finding of No Significant Impact (FONSI) for this project and a final EA on January 23, 1997. Copies of the EA and FONSI are enclosed.

This NEPA decision was based on the consideration that there are no significant impacts to the environment or human health as a result of the proposed DP Road land transfer. DOE is aware of other issues associated with land transfers, and therefore, no land will be transferred from DOE ownership until these issues are discussed in a public forum. A public meeting to discuss future land transfer issues will be held on February 18, 1997, at LAAO, 528 35th Street, Los Alamos, NM, Room 100, from 6:00 p.m. to 9:00 p.m. There currently is no "master plan" proposal to transfer large land acreages from DOE management to any entity, although there has been some contemplation of pursuing such an action within the foreseeable future. Until an actual proposal for land transfer has been put together, it is not possible for DOE to comply with NEPA and to make any decision(s) regarding such a proposal.

In your letter, you asked several questions and made some observations and comments that I would like to address directly. For convenience, I refer to your comments by number in my responses presented below.

JAN 23 1997

## General Comments:

1. DOE has received the referenced request by the Citizens' Advisory Board (CAB) dated January 3, 1997. A response will be sent to the CAB shortly. Public participation in DOE decision-making is encouraged through the NEPA process and other forums.
2. The County proposes to use the DP Road Tract for their own purposes. However, it may choose to sell or lease the property to other parties. If the County conveys the land to other parties, the County still reaps the benefits of the transfer.
3. As stated above in this letter, DOE is planning to have a public meeting that will focus on land transfer issues. These issues, as understood by DOE thus far, seem to focus on ownership claims for properties in the area that might later be proposed for transfer out of DOE management. I would very much appreciate your thoughts on an agenda and procedures for this meeting.
4. A feasibility study for moving County operations to the DP Road Site was performed by the County of Los Alamos (County). Please contact Mr. Kevin Fenner, County Development Director, at (505) 662-8198, to request a copy of this study.
5. The transfer of the property will require a title search and deed documentation as part of the actual legal transfer arrangements. Now that DOE has decided to transfer the property, all appropriate title search and survey activities, etc., can be initiated. Based on information obtained that is not part of the formal title search, the DP Road tract apparently was obtained for use as part of the Manhattan Project from the Los Alamos Ranch School for monetary consideration
6. DOE can proceed with the proposed action without knowing all detailed socioeconomic effects on surrounding minority populations because the likely effects of providing new jobs and increased incomes in a given area is generally thought of to be a positive, beneficial effect. DOE's analysis under the Environmental Justice Executive Order 12898 determined that the health and socioeconomic effect for minority and low-income populations would not be disproportionately adverse.

## Specific Comments:

1. The statement made in the EA is that "The Proposed Action is intended to accelerate economic development activities within the County through the employment opportunities offered subsequent to the attainment of additional property ownership and its following use." We did not use a computer model to provide the underlying analysis for this statement, nor was a distributional equity of income analysis for the Northern New Mexico Region performed.

JAN 23 1997

2. The "sliding scale" approach referenced in the EA is a method commonly used by DOE in preparing NEPA documentation. This approach is suggested in DOE NEPA document preparation guidance for all EAs and Environmental Impact Statements (EIS). This approach is designed to focus EAs and EISs on issues with potential for significant environmental issues and alternatives and to discuss impacts in proportion to their significance. An example of the application of this "sliding scale" approach in the subject EA is the level of analysis given to the potential for economic impact of the land transfer verses the level of analysis given to noise generation concerns.
3. The EA documents previous disturbance of the land tract as it relates to its present condition. Based on anecdotal accounts and review of readily available aerial photographs, the site was partially used as a residential trailer park in the 1960s. For the past 20 or so years it has been vacant land.
4. There is no relationship between the Clean Air Act law suit and the transfer of the DP Road Tract. The discussion of potential air quality effects was presented for informational purposes to ensure completeness of the EA analysis.

I appreciate receiving your comments. I hope this letter, together with the accompanying changes made to the EA, has further clarified some of your comments regarding the proposed action. If you would like further information regarding this project, please call Dean Triebel, Office of Environment and Projects, at (505) 665-6353. If you have any questions regarding our LAAO NEPA program, please call Elizabeth Withers, NEPA Compliance Officer, at (505) 667-8690.

Sincerely,

  
G. Thomas Todd  
Area Manager

Mr. Dean Tribal  
EA Document Manager  
528 35th Street  
Los Alamos, New Mexico 87544

Dear Mr. Tribal:

I have reviewed the (draft) Environmental Assessment (EA) for the proposed transfer of the D1 Road Tract. The proposed alternative of transfer of 28 acres to the county of Los Alamos is inappropriate without consideration of transfer to the Pueblo de San Ildefonso. The Pueblo would like to an additional alternative study that does include transfer to the Pueblo of those lands identified in the draft EA. It is important that the concerns and interests of the Pueblo de San Ildefonso be part of any consideration and consultation, prior to any predetermined decision; or not, of the disposition of ancestral lands within the Los Alamos Laboratory.

We would appreciate that this new alternative be given high priority consideration. Please direct future comments on this matter to myself and Bill B. Wyatt, Environmental Program Manager. I would appreciate your understanding of this matter as it is currently before us.

Sincerely,

Elmer C. Torres  
Governor

JAN 23 1997

FWS Comment: "Moreover, the EA (Section 4.4) does not discuss the cumulative effects of population growth."

We have added a statement to Section 4.4 that discusses the cumulative effects of population growth. No cumulative effect is anticipated related to population growth on the area, again because of the unusual work location verses residential location situation in Los Alamos County.

FWS Comment: "Wildlife resources are susceptible to impacts in the Potential Accident Scenario (Section 5.0) given in the EA. However, there is no discussion of the effects of such an accident to wildlife resources."

The accident scenario discussed in this EA is intended to describe impacts to the human population. There is no attempt to discuss effects on wildlife resources because of a lack of appropriate information to do so in a meaningful way. The issue of accident scenarios and risk presentation is one of concern to NEPA compliance personnel within DOE; a team is currently being formed to make recommendations regarding improvements in this area of EA analysis. The issue of whether to present limited information on potential wildlife effects and, if so, how to frame the discussion will be considered.

FWS Comment: "The spelling of the specific name for the Mexican spotted owl on page 19 should be changed to *occidentalis*."

The correct spelling of the epithet name has been corrected in the final version of the EA.

I appreciate both your comments and your support of the LAAO NEPA program. I hope this letter, together with the accompanying changes made to the EA, has further clarified some of your comments regarding the proposed action. If you would like further information regarding this project, please call Dean Triebel, Office of Environment and Projects, at (505) 665-6353. If you have any questions regarding our LAAO NEPA program, please call Elizabeth Withers, NEPA Compliance Officer, at (505) 667-8690.

Sincerely,

G. Thomas Todd  
Area Manager

Los Alamos, N.M. 87544

Dear Mr. Triebel:

RE: ENVIRONMENTAL ASSESSMENT FOR THE TRANSFER OF THE DP ROAD TRACT TO THE COUNTY OF LOS ALAMOS, LOS ALAMOS, NEW MEXICO (DOE-EA-1184), PREDECISIONAL DRAFT; U.S. DEPARTMENT OF ENERGY, LOS ALAMOS AREA OFFICE; NOVEMBER 15, 1996

The following transmits New Mexico Environment Department (NMED) staff comments concerning the above-referenced Predecisional Draft Environmental Assessment (PDEA).

**A. HAZARDOUS AND RADIOACTIVE MATERIALS ISSUES**

**1. Affected NMED Laws and Regulations**

The Department's Hazardous and Radioactive Materials Bureau (HRMB) is responsible for enforcing and ensuring compliance with the Resource and Conservation Recovery Act (RCRA) within the State of New Mexico. The Department of Energy (DOE)/Los Alamos National Laboratory (LANL) is currently implementing Corrective Action through the Environmental Restoration (ER) program as required by RCRA Sections 3004 (u) and (v), 40 Code of Federal Regulations Parts 260-280, and by the New Mexico Hazardous Waste Management Regulations found in Title 20, Chapter 4. The proposed land transfer could possibly impact current RCRA investigations and potential remedial actions at the following Potential Release Sites (PRS): PRS 0-010(a), PRS 0-030(b), and PRS 21-015.

**2. Specific Impacts**

PRS 0-010(a) is a suspected surface disposal area which is an Area of Concern (AOC) not listed on the HSWA permit and has been proposed for No Further Action (NFA) in a Request for Permit Modification dated March 1995. NMED has reviewed the information presented for NFA justification and does not agree that information exists to determine if NFA can be justified or if the site should

past problems associated with this MDA, make it essential and prudent that more information about the site be presented to provide a better picture of the "entire area".

2. Page 11, Section 2.1.1, top of page

The existence of the buried radioactive waste line should be presented in more detail. This should include its future status as well as a contingency plan addressing potential leaks in the line after the land transfer and future development. Incidentally, what is the true size of this waste line as 7.5 cm in not equal to 33 inches, as stated?

3. Page 12, Section 2.1.2, first paragraph, last sentence

"Any environmental monitoring and protection on the DP Road tract, if necessary, would be the responsibility of the County."

Comment: It is not clear to the reader if the County would also be responsible for environmental monitoring of the DOE's easement containing the radioactive waste line that transects this tract. It is probably not good policy to leave the primary responsibility of monitoring DOE's radioactive waste line to the County. The DOE should maintain this function until the line is removed or state how it will assure the County that it will be responsible to the tract's future inhabitants by providing an early warning system in the event of an integrity problem with the radioactive waste line.

What action is being taken to ensure that the radioactive waste line that crosses the DP Road Tract will not be intruded upon by potential construction scenarios? Has the radioactive waste line been geographically verified recently (by a non-destructive method) to ensure that its location on the plans of that area are correct?

4. Page 22, Section 3.8, second paragraph

A dose of 0.4 mrem/yr cannot be measured directly from TLD chips. This must be a computer modeling estimate.

5. Page 23, Section 3.9, second paragraph

"Radioactive and nonradioactive air emissions are in compliance with the Clean Air Act and the New Mexico Air Quality Control Act (LANL 1996)."

Comment: This statement is very misleading, particularly to a concerned public wanting to know the present status of the Laboratory's compliance with the Clean Air Act. In a civil case filed on April 2, 1996, the DOE clearly admitted that LANL is out of compliance with the Clean Air Act and corresponding regulations: *Concerned Citizens for Nuclear Safety, Inc, and Patrick Jerome Chavez, Plaintiffs, v. United States Department of Energy and Siegfried S. Hecker, Defendants.*

6. Page 23-24, Section 3.1, last paragraph

Comment: Due to the large area of impermeable surfaces located near to this parcel of land and the close proximity of MDA-B, the NMED staff feel that the discharge runoff volume stated is too low and contaminants from MDA-B may be discharged onto the property by surface flow or by possible subsurface transport.

7. Page 31, Section 4.1.6

There is insufficient evidence in this and the previous sections (Sections 3.6.4.1.4) to make the conclusions of no or minimal impact to the human health of future site workers. Only impacts from the operational LANL facilities have been considered as possible human health risk; no health impacts have been made based on levels of contaminants presently found in soils or debris on or near the site. Soil sampling data from the on-site and nearby PRSs should have been incorporated into the risk assessment for construction workers and other future workers at the DP Road Tract.

8. Page 32, Section 4.1.7

If 2699 pounds in ten years of CO equals 0.071 ppm (from table 4.1.7.1 - highest 8 hr ave.) then it follows that a ratio can be established using the CO release given in table 4.1.7.2. as follows:

$$\frac{183,423 \text{ lbs/yr}}{269.9 \text{ lbs/yr}} = \frac{x}{0.071 \text{ ppm}}$$

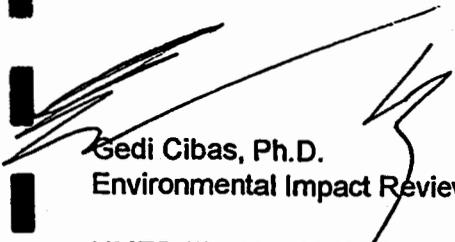

Therefore,  $x = 48.25 \text{ ppm}$ , which exceeds the New Mexico Air Quality standards shown in table 4.1.7.1.

9. Page 50, Appendix B, last paragraph

Dose Conversion Factors are in units of rem/Ci, not rem/g as stated.

We appreciate the opportunity to review this document. Please let us know if you have any questions on our comments.

Sincerely,

Gedi Cibas, Ph.D.  
Environmental Impact Review Coordinator

Gedi Cibas, Ph.D.  
New Mexico Environment Department  
1190 St. Francis Drive  
P. O. Box 26110  
Santa Fe, NM 87502

Dear Dr. Cibas:

This responds to your December 10, 1996 letter commenting on the Pre-decisional Draft Environmental Assessment (EA) for the *Transfer of the DP Road Tract to the County of Los Alamos, New Mexico* (DOE/EA-1184). We appreciate the New Mexico Environment Department's (NMED) interest in the Los Alamos Area Office's (LAAO) National Environmental Policy Act (NEPA) program and thank you for commenting on the draft EA. The final EA reflects changes made to the text to address comments received from your office and other stakeholders. The Department of Energy (DOE) issued a Finding of No Significant Impact (FONSI) for this project and a final EA on January 23, 1997. Copies of the EA and FONSI are enclosed.

This NEPA determination was based on the consideration that there are no significant impacts to the environment or human health as a result of the proposed land transfer. DOE is aware of other issues associated with land transfers, and therefore, no land will be transferred from DOE ownership until these issues are discussed in a public forum. You are invited to attend a public meeting to discuss future land transfer issues on February 18, 1997, at LAAO, 528 35th Street, Los Alamos, New Mexico, Room 100, from 6:00 p.m. to 9:00 p.m.

In your letter, you asked several questions and made some serious observations and comments that I would like to briefly address. For convenience, I refer to your comments by number in my responses presented below. Text locations referencing changes to the final EA document are indicated.

A.1. Potential Release Sites (PRS) located on the DP Road tract have been recommended for "No Further Action." However, DOE intends to retain right of reentry onto the property and to not release the PRSs for development purposes until all issues regarding their status have been settled. The final approved EA discusses the potential effects of these PRSs on the Proposed Action (with added text, Chapter 4.1.4), and deed restrictions for the transfer actions will address this issue as well. The deed restrictions for the land

JAN 23 1997

transfer actions will address specific actions to be taken to ensure no negative impact on Resource Conservation and Recovery Act (RCRA) investigations and potential remedial actions.

A.2. Thank you for the additional information on the PRS at and near to the DP Road Tract. DOE will ensure no earth is disturbed at these PRS areas until State approval to do so has been granted. Los Alamos National Laboratory's (LANL) Environmental Restoration Project has provided additional information regarding these PRSs. Based on limited site analytical sampling results that have at least tentatively established the suspected extent of contamination with relationship to the subject land tract, a 100-foot buffer zone will be established around Material Disposal Area (MDA)-B to ensure that no significant contamination is inadvertently spread across the site during construction activities. This buffer zone will not be released to the County for development until issues regarding the extent of this PRS are settled and mitigation has been accomplished if necessary. The MAP for this action additionally addresses this concern by providing DOE radiological technician assistance to the County during the initial development on the land transfer tract.

B. The air permitting for development of the tract will be the responsibility of the County of Los Alamos as stated in your comment. The County has been informed of your comment regarding their need to contact NMED's Air Quality Bureau if air emission sources are to be installed that require permitting, and their need to commit to a plan for controlling particulate emissions during construction activities.

C. 1. As already noted, information concerning the MDA-B has been included in the final approved EA (See Sections 3.5 and 4.1.4 of the EA.), and the Mitigation Action Plan addresses action needed to ensure that no adverse effects result from the close proximity of this site to the land tract development.

C.2. and C.3. The EA states in Section 4.1.4 that there will be a 15 m (50 ft) easement established for the buried radioactive waste line. This easement will be sufficient to ensure that the future status of the waste line can be ascertained (e.g., monitoring activities) and, if necessary, the line can be removed when it is no longer needed. Future development of the site that might affect this easement (such as paving over the easement) will have to be conducted with DOE's approval and oversight. The exact waste line location will be surveyed, the easement staked and flagged, and the location included on the site maps before construction is initiated. The correct diameter of the waste line is 3 inches, or 7.5 cm. This typographical error was corrected in the final EA, Chapter 2.1.1.

C.4. You are correct in stating that a dose of 0.4 mrem/yr cannot be measured by thermoluminescent dosimetry. This value was calculated by an Environmental Protection Agency (EPA) approved radiological air emissions modeling computer code. The wording in the final EA has been changed to reflect this information. (Section 3.8)

JAN 23 1997

C.5. DOE believes that LANL's radioactive and nonradioactive air emissions are currently in compliance with the Clean Air Act. Although a citizen's lawsuit was brought against the DOE in 1994 alleging non-compliance, that suit has been settled. DOE is unaware of any further allegation by anyone that emissions are not in compliance.

C.6. The runoff volume noted in Chapter 3 of the EA takes into account the natural state of the DP Road tract. The vegetation roots and developed soil layer serve as an absorption pad to take in water and to minimize surface flow and erosion. In addition, the fractured tuff substrate of the area contributes to the water's percolation. Water runoff from DP Road in front of the tract is controlled by concrete curbs. As described in Section 3.6, no surface water flows from MDA-B into the DP Road tract because the tract has a higher elevation, and part of it is physically separated from MDA-B by a canyon.

C.7. DOE disagrees with this comment. We feel there is sufficient evidence to make conclusions of no or minimal impact to the human health of future site workers based on the information included in the EA regarding the future use of the site and the effect of the proposed development on the existing environment at the site. While it is true that we considered the potential effects of an accident that was initiated at Technical Area 21 on the site, it was believed that this scenario represents a bounding case or worst case possibility of risks to workers at the site. Mitigative measures are being taken to protect site workers against potential health effects that might be associated with the PRSs present onsite or nearby. Soil sampling has been conducted at the site with the determination that no further site cleanup is needed, pending State approval. Additional measures are being taken to assure that no significant contamination from MDA-B affects the site workers either.

C.8. The Proposed Action is not expected to exceed any NMED Air Quality standards for any criteria pollutants. Using a simple ratio to compare emission rates (lbs/yr) from construction activities to those from automobiles to estimate contaminant concentrations (ppm) for determining compliance with air quality standards is inappropriate. Although there are a number of technical factors that makes this an inappropriate comparison, the overriding difference involves the size of the receptor, which in turn affects the contaminant concentration levels. For construction emissions, the receptor is the 30,000 square feet building site which is relatively small. For automobile emissions, receptors occur along a fourteen-mile-long public road (estimated to be 25 million square feet). The receptor for the automobile emissions is approximately a factor of three larger than the size of the receptor used for the construction emissions.

C.9. This error was corrected in the final approved EA. (Appendix B)

I appreciate both your comments and your support of the LAAO NEPA program. I hope this letter, together with the accompanying changes made to the EA, has further clarified some of your comments regarding the proposed action. If you would like further
