

SEIS Data Input for Vitrification Option

Comment No.	2008	2010
1 p1	Vitrify up to 13 MT of surplus plutonium	Vitrify both pit and non pit surplus plutonium. If pits are to be included then a major part of PDC would have to be added to the VIT project. (DWPF as source of glass over pour would be a disconnect. If pits included used PDC data since it is actually the current plan and includes what used to be the 13MT of surplus Pu as well as the pits.
2 p1	May want to revisit dates. As an example - 2009 has passed. Slip dates 4 years from the dates in the 2008 inputs.	If dates are adjusted keep same durations Maybe start with design complete 2013
3 p2	Employment numbers (FTEs and Shifts) hold but dates have slipped	
4 p3	Worker exposures slip dates	
5 p3	Utilities slip dates	
6 p4	Resources Slip Dates
