Subject: SRS LLW Transport Data

Milton,

Sorry it took so long. Attached spreadsheet shows the volume and isotope activity for LLW transported on site from on-site generators to our E-Area disposal facility in FY10. It does not include any waste shipped into SRS from off site, waste relocations within E-Area, and excludes one on-site package (package characterization is attached as separate file) that skews any averages. Total spreadsheet LLW volume was 7,873 m3 and activity was 1.1E+5 curies.

John Harley, SRNS
