Date of Conversation: 2/19/08

Initiated By: Milton Gorden

Person Contacted: John Harley

Contact Phone Number: [REDACTED]

Reason for Contact: Obtain information regarding the reasons for reductions in waste stream volumes in 2007 as compared to the 5-year average.

Summary: Mr. Harley was contacted to obtain information regarding why low level waste, hazardous waste, mixed waste and sanitary waste generation volumes for 2007 were notably lower than the previous five-year average. Mr. Harley stated that low level waste volumes decreased primarily due to fewer decontamination and decommissioning activities occurring in 2007. He also stated that the other waste stream generation rate changes were dependent on environmental restoration activities.

Actions to be Taken: Mr. Gorden will update the text in Chapter 3, Affected Environment, to reflect the above information.

Date of Conversation: 2/19/08

Initiated By: Milton Gorden

Person Contacted: Carey Stevens, WSRC

Contact Phone Number: [REDACTED]

Reason for Contact: Obtain information on proposed hazardous waste/mixed waste (HW/MW) treatment buildings and vaults.

Summary: The HW/MW treatment buildings and vaults are currently shown in the High Level Waste (HLW) Tanks Environmental Impact Statement (EIS), issued in 2002, as planned facilities. Mr. Stevens was contact to determine if these plans are still in effect. Mr. Stevens stated that the HW/MW treatment buildings and vaults are no longer officially planned. In addition, Mr. Stevens stated that the M Area Storage Pads no longer exist. The HW and MW storage buildings should be shown together, not separately, because some of these facilities can be used interchangeably.

Actions to be Taken: Mr. Gorden will update the SRS storage capabilities table to be shown in Chapter 3, Affected Environment, to reflect the above information.
