Using 5 to 8 cubic meters per shipment and assuming 9,800 cubic meters to go. 1,225 to 1,960 shipments.

Bert,

Could you help out once again, with one more detail? Can you tell us the estimated number of shipments expected to be made from SRS to WIPP going forward to complete transport of the assumed 15,500 cubic meters in your earlier e-mail?

Sachiko is out of the office this afternoon and asked me to send this e-mail directly to you.

Thanks for your help. I hope we won't have to bother you with anything else for this SA.

Chadi

Subject: One more questionLink

The TRU waste volume in the latest DOE-SR baseline assumes approximately 15, 500 cubic meters of TRU waste will be shipped to WIPP over the EM lifecycle through 2038. Currently SRS has shipped 27,100 drums or approximately 5,700 cubic meters to WIPP. The majority of the future TRU waste to be generated is expected to be from NNSA missions such as MOX and PDCF. The remaining legacy TRU waste volume planned for disposition at WIPP is estimated to be less than 3,000 cubic meters.

Subject: One more question

What is the total amount of TRU waste estimated to be shipped from SRS to WIPP? How much has been shipped to date?

Could you please respond based on both the number of shipments and volume.

Thanks,
Sachiko
