Subject Fw: Data Call Response for K-Area Immobilization Project

SAIC is requesting additional information to the PuD/Immobilization data call. These questions are highlighted in yellow in the original table, and also in the new table that I have attached immediately below. For clarity, please note that the rev. 2 responders' names are provided in blue text.

Responders for last week's data call questions (rev. 1) were identified in red text.

If I have confused anyone, please give me a call. A key to those expected to provide response to data call questions is provided as follows;

Vernon Osteen - Questions 1,2, and 3  
Bruce Hewett - Question 5 (complete)  
Greg Burbage - Question 6, 11, 20  
Kevin Durrwachter - 7, 25-31  
Linda Nass - 8, 9, 10, 17, 18, 19  
John Hammond - 12, 13, 15, 16 (complete)  
Ben Morgan - 14, 21, 22  
P.K. Hightower - 23, 24, 32

John Hammond/Rick Spaulding - Question 16a  
Betsy Westover - 16b  
Clayton Holloway - 16c  
Linda Nass - 19a

John

Attached is a partial response to your recent 'Immorbilization Facility Information Request'. As I'm sure you're aware, the specific data requested in the attached table cannot be published in the SEIS or otherwise made available to the public. Do you feel you still need the listed data for purposes of analysis?

Thanks.

Greg, per your data call request -

Description of facility including:

- Building number
- Floorplan with equipment arrangement
- Features that prevent unauthorized entry (unclassified description)
- Features that ensure safeguards against malevolent acts or material diversion by internal and external entities (unclassified description)

Old K-Reactor Building **NOTE: [REDACTED] per DOE-SR OPSEC Guide.**

Data Call Response – 10/25/07, file “Vitrification System” and “Oxidation System” **NOTE: Floor Plans for Sensitive Facilities are [REDACTED].**

5) Bruce Hewett – is there a document/plan/description that we can provide SAIC?

**DOE Orders along with SRS 7Q Security Manual Procedures identify the Facility Security Requirements. Security & Safeguard Features, to include DBT Upgrades, are [REDACTED]**

Subject Fw: Data Call Response for K-Area Immobilization Project

Your assistance is requested to support the Plutonium Disposition Project EIS. The EIS contractor, SAIC, provided a data call to WSRC in late 2007. Now SAIC, having completed their review of the WSRC information submitted, have further questions. These "gaps" in information are included in the data call that I have **attached below**.

Please open the data call and find where your name, with questions, are listed in red text. Respond to me with information as quickly as possible. I apologize for the expedited return request, however, the PuD Project decision has been accelerated and the supporting documentation is critical to timely completion of the EIS. Thanks in advance.

Vernon Osteen - Questions 1,2, and 3  
Bruce Hewett - Question 5  
Greg Burbage - Question 6, 11, 20  
Kevin Durrwachter - 7, 25-31  
Linda Nass - 8, 9, 10, 17, 18, 19  
John Hammond - 12, 13, 15, 16  
Ben Morgan - 14, 21, 22  
P.K. Hightower - 23, 24, 32

**Immobilization Facility Information Request**  
 (please provide numerical data in commonly reported units)

Information Requested	Response
<b>Immobilization Facility</b>	<b>Modification of K-Reactor Building for immobilization of up to 13 metric tons surplus plutonium using the glass can-in-canister approach</b>
<b>General</b>	
Schedule - Design - Construction or Modification - Operation - Deactivation and decommissioning	<b>Source: Data Call Response – 10/4/07</b> Design complete – 2009 Construction complete – 2013 Operations – 6 years ending in 2019 Deactivation and Decommissioning – Begins 2019
Description of facility including: - Building number - Latitude and Longitude - Elevation above NGVD (units) - Area (units) - Plot plan - Floorplan with equipment arrangement - Features that prevent unauthorized entry (unclassified description) - Features that ensure safeguards against malevolent acts or material diversion by internal and external entities (unclassified description) - Fire protection systems - Features that control releases of airborne contaminants (include diagram of treatment train) - Features that control releases of waterborne contaminants (include diagram of treatment train) - Features/procedures that prevent criticality - Description of liquid and non-liquid waste processing	Old K-Reactor Building 1) Vernon O'Steen – can you provide a lat & longitude generally in front of KAC? 2) Vernon O'Steen – do you have elevation capability? 3) Vernon O'Steen – do you have acreage/hectares assessment capability? 4) Not applicable Data Call Response – 10/25/07, file “Vitrification System” and “Oxidation System” 5) Bruce Hewett – is there a document/plan/description that we can provide SAIC? <b>DOE Orders along with SRS 7Q Security Manual Procedures identify the Facility Security Requirements. Security &amp; Safeguard Features, to include DBT Upgrades, are controlled information.</b> Data Call Response – 10/25/07, file “ICS and MCA”  Data Call Response – 10/25/07, file “Fire Protection” Data Call Response – 10/25/07, file “Vitrification System” and “HVAC”  6) Greg Burbage – description to describe building sumps/pumps (Randy Sears)  7) Kevin Durrwachter – please provide document/information that prevents KAC criticality. Data Call Response – 10/25/07, file “Waste Management” and “Waste Study” (SK-DA-WM-0001)
<b>Construction/modification</b>	
Land disturbed for laydown (acres or hectares)	2 acres <b>Source: Data Call Response – 10/25/07, file “Site Work”</b>
Description of activities conducted (e.g., decontamination/removal/disposal of existing facilities/equipment, land clearing, onsite concrete plant) and modifications needed (e.g., floors, walls, support beams, roof, waste management, ventilation, new roads)	Data Call Response – 10/4/07 & Data Call Response – 10/25/07, file “Waste Study” (SK-DA-WM-0001)

Information Requested	Response
Describe type and quantity of air pollutant emitting equipment and frequency and duration of use.	Data Call Response – 10/25/07, file “Construction Equipment”
Describe type and quantity of noise producing equipment and frequency and duration of use.	Data Call Response – 10/25/07, file “Construction Equipment”
Emission release parameters – For any stack releases - release location (latitude & longitude), stack height, stack diameter, stack exhaust velocity or flow rate, exhaust air temperature – For fugitive releases - release location and dimensions of source area	8) Linda Nass – describe, if applicable/quantifiable, emissions released during CX/mod. phase of project?  9) Linda Nass – describe, if applicable/quantifiable, fugitive emissions during CX/mod. phase of project?
Air emissions (point source and fugitive): - Criteria Pollutants (metric tons/yr) - HAPs (kilograms/yr) - Radioisotopes (curies/yr)	10) Linda Nass – are there any point source or fugitive source releases for criteria pollutants, HAPs, or radioisotopes during CX/mod. phase of the project?
Liquid effluents - Location(s) of discharge(s) and copies of permit(s) - Rate(s) of discharge(s) (units/day) - Concentrations of contaminants (picocuries/liter or micrograms/liter)	11) Greg Burbage – describe liquid emissions (locations, permits, rates, concentrations, contaminants) created during CX/mod. phase of the project?
Employment for each year (FTEs)	12) John Hammond – do you have employment numbers for the CX/mod. phase of the project? Maximum FTE’s (Year/FTE): FY09/99, FY10/151., FY11/119, FY12/0, FY13/0, FY14/182, FY15/330, FY16/307, FY17/340., FY18/210, FY19/241, FY20/169, FY21/179 & FY22/76 Average FTE’s (Year/FTE): FY09/83, FY10/99., FY11/75, FY12/0, FY13/0, FY14/90, FY15/263, FY16/281, FY17/231., FY18/161, FY19/169, FY20/132, FY21/128 & FY22/47
Shifts	13) John Hammond – do you have shifts information for the CX/mod. phase of the project? Day and night shifts will be required to achieve schedule completion dates.
Worker radiological exposure - total dose (person-rem)	14) Ben Morgan – is radiological exposure information during CX phase of the project available?
Number of exposed workers	15) John Hammond – can you estimate a number of workers exposed for the CX/mod. phase of the project? Average FTE’s: FY09/83, FY10/99 (Note: The D&R was scheduled during FY09 & FY10. It is assumed that after D&R is completed that the sources will be removed and the work areas will be rolled back. Therefore, no radiological exposure is expected after the D&R phase is completed.

Information Requested	Response																																																																																		
Utilities needed - Potable water (units/yr) - Non-potable water (units/yr) - Electricity (units) - Gasoline (units/yr) - Diesel Fuel (units/yr)	16) John Hammond – can you estimate in annual usage for the CX/mod. phase of the project of potable water, non-potable water, electricity, gasoline, and diesel fuel? (As provided by Rick Spaulding, CX Mngr). <table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th></th> <th>FY09</th> <th>FY10</th> <th>FY11</th> <th>FY12/13</th> <th>FY14</th> <th>FY15</th> <th>FY16</th> <th>FY17</th> <th>FY18</th> <th>FY19</th> <th>FY20</th> <th>FY21</th> <th>FY22</th> </tr> </thead> <tbody> <tr> <td>Pot Water (gal)</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td>500</td> <td>500</td> <td>500</td> <td>500</td> <td>500</td> <td>500</td> <td>500</td> <td>500</td> <td>500</td> </tr> <tr> <td>Non-Pot (gal)</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td>1000</td> <td>1000</td> <td>1000</td> <td>1000</td> <td>1000</td> <td>1000</td> <td>1000</td> <td>1000</td> <td>1000</td> </tr> <tr> <td>Gas (gal)</td> <td>200</td> <td>200</td> <td>200</td> <td>0</td> <td>200</td> <td>1000</td> <td>1000</td> <td>1000</td> <td>500</td> <td>500</td> <td>500</td> <td>300</td> <td>200</td> </tr> <tr> <td>Diesel (gal)</td> <td>400</td> <td>400</td> <td>400</td> <td>0</td> <td>400</td> <td>5000</td> <td>5000</td> <td>5000</td> <td>3000</td> <td>2000</td> <td>1000</td> <td>1000</td> <td>400</td> </tr> </tbody> </table>														FY09	FY10	FY11	FY12/13	FY14	FY15	FY16	FY17	FY18	FY19	FY20	FY21	FY22	Pot Water (gal)	0	0	0	0	500	500	500	500	500	500	500	500	500	Non-Pot (gal)	0	0	0	0	1000	1000	1000	1000	1000	1000	1000	1000	1000	Gas (gal)	200	200	200	0	200	1000	1000	1000	500	500	500	300	200	Diesel (gal)	400	400	400	0	400	5000	5000	5000	3000	2000	1000	1000	400

Resources needed - Concrete (units)  - Asphalt (units) - Steel (units) - Crushed stone (units) - Sand & Gravel (units) - Soil (units) - Lumber (units) - Chemicals (units) - Gases (units) - Other construction materials (units)	Data Call Response – 10/4/07 (concrete volumes) Data Call Response – 10/25/07, file “CSA Outside PIDAS” (concrete volumes for fan house, sand filter and stack)  16a) John Hammond (or Rick Spaulding if delegated) – can you provide the construction phase demands for asphalt, steel, crushed stone, sand & gravel, soil, lumber, chemicals, gases, and other, as requested at left?																																																																																		
Waste generated (provide solid and liquid separately) (units/yr): - TRU - LLW - MLLW - Hazardous - Non-Hazardous	Data Call Response – 10/25/07, file “Waste Study” (SK-DA-WM-0001) volumes not provided  16b) Betsy Westover – can you please provide construction phase waste generated for TRU, LLW, MLLW, Hazardous, Non-hazardous?																																																																																		
<b>Operations</b>																																																																																			
Description of Process including: - Flowchart - Throughput (units/yr) - Number of cans filled per year	16c) Clayton Holloway – can you provide a Operations process description flowchart to me for SAIC? Five 3013 cans per day <b>Source: Data Call Response – 10/25/07, file “Preliminary Assumptions”</b> 16d) Clayton Holloway – can you provide the number of cans filled per year during Operations of PuD?																																																																																		
Please provide: - Number of DWPF canisters needed - Additional DWPF canisters created	790 CIC units per <i>Pu Disposition Alternatives Analysis</i> (Y-AES-G-00001) 95 additional canisters per <i>Pu Disposition Alternatives Analysis</i> (Y-AES-G-00001)																																																																																		

Information Requested	Response
<p>Emission release parameters</p> <ul style="list-style-type: none"> <li>- For stack releases - release location (latitude &amp; longitude), stack height, stack diameter, stack exhaust velocity or flow rate, exhaust air temperature</li> <li>- For fugitive releases - release location and dimensions (including height) of vents or louvers from which release would occur</li> <li>- Emissions from emergency generators, boilers, and other ancillary equipment</li> </ul>	<p>17) Linda Nass – describe emissions released during operation of PuV for stack, stack height, stack diameter, exhaust velocity, temp, etc.?</p> <p>18) Linda Nass – describe fugitive emissions released during operation of PuV, and dimensions of fugitive sources?</p> <p>19) Linda Nass – describe emissions released during operation for PuV from emergency generators, boilers, else?</p>
<p>Air emissions</p> <ul style="list-style-type: none"> <li>- Criteria Pollutants (metric tons/yr)</li> <li>- HAPs (kilograms/yr)</li> <li>- Radioisotopes (curies/yr)</li> </ul>	<p>19a) Linda Nass – can you provide Operations phase criteria pollutants released in metric tons per year? Data Call Response – 10/25/07, file “Emissions Calculation” Data Call Response – 10/25/07, file “Emissions Calculation”</p>
<p>Liquid effluents</p> <ul style="list-style-type: none"> <li>- Location(s) of outfall(s)</li> <li>- Rate(s) of discharge(s) (units/day)</li> <li>- Concentrations of contaminants (picocuries/liter or micrograms/liter)</li> </ul>	<p>20) Greg Burbage – describe liquid releases during PuV ops. (locations, rates, concentration of contaminants)?</p>
<p>Employment (FTEs)</p>	<p>34 (24 vit process operators plus 10 waste management) <b>Source: Data Call Response – 10/25/07, file “Preliminary Assumptions”</b></p>
<p>Shifts</p>	<p>Operates 24 hrs/day; 7 days/week with 12 hr shifts <b>Source: Data Call Response – 10/25/07, file “Preliminary Assumptions”</b></p>
<p>Employee radiological exposure - total dose (person-rem)</p>	<p>21) Ben Morgan – during operations do you know total dose for employee radiological exposure?</p>
<p>Number of exposed workers</p>	<p>22) Ben Morgan – during operations do you know the number of workers exposed?</p>
<p>Utilities needed</p> <ul style="list-style-type: none"> <li>- Potable water (units/yr)</li> <li>- Non-potable water (units/yr)</li> <li>- Electricity (kw/hr)</li> <li>- Natural gas (units/yr)</li> <li>- Coal (units/yr)</li> <li>- Gasoline (units/yr)</li> <li>- Diesel Fuel (transportation) (units/yr)</li> <li>- Heating fuel oil (units/yr)</li> </ul>	<p>23) P.K. Hightower – do you know the POC for utilities? Please ask that they respond for this anticipated usage during operations phase of PuV.</p>

Information Requested	Response
<p>Resources needed</p> <ul style="list-style-type: none"> <li>- Metals (units/yr)</li> <li>- Frit (units/yr)</li> <li>- Ceramic precursors (units/yr)</li> <li>- Chemicals (units/yr)</li> <li>- Gases (units/yr)</li> <li>- other materials (units/yr)</li> </ul>	<p>24) P.K. Hightower – do you know the POC for resources? Please ask that they respond for this anticipated usage during operations phase of PuV.</p>
<p>Waste generated (solid or liquid) (units/yr):</p> <ul style="list-style-type: none"> <li>- TRU</li> <li>- LLW</li> <li>- MLLW</li> <li>- Hazardous</li> <li>- Non-Hazardous</li> </ul>	<p><b>Source: Data Call Response – 10/25/07, file “Waste Study” (SK-DA-WM-0001)</b>                      460 m3/yr                      250 m3/yr                      80 m3/yr                      80 m3/yr                      50 m3/yr                      No liquid waste expected.</p>
<p>Please provide any safety documentation (e.g., safety assessments, safety analysis reports) for these facilities.</p>	<p>25) Kevin Durrwachter – please provide safety doc.s (electronically) requested so that I may forward to SAIC.</p>
<p>List any accident scenarios (in existing safety or NEPA documents) that need to be modified because of changes produced by the proposed action. For any new or modified scenarios provide the information listed below:</p>	<p>26) Kevin Durrwachter – please provide any accident scenarios in existing safety doc.s that must be changed for PuV ops. (please provide per below table criteria).</p>
<p>Radiological accidents</p> <ul style="list-style-type: none"> <li>- Accident description (include release pathways and mitigating factors)</li> <li>- Accident frequency</li> <li>- Material at risk</li> <li>- Material characteristics</li> <li>- Source term released to environment (curies by isotope)</li> <li>- Release parameters: release fractions, release timing, location, release height, release duration, and heat of release</li> <li>- Filtration (specify efficiency)</li> <li>- Number of involved workers</li> </ul>	<p>26) continued, Kevin Durrwachter</p>

<b>Information Requested</b>	<b>Response</b>
Chemical inventory for chemical accident analysis - List chemicals, total facility inventory, and annual usage of the chemical - Size and location of largest tank (storage container) for each chemical. Include floor area or diked area that would contain the spill when applicable. - Concentration of chemical in largest tank (identify if this is the highest concentration of the chemical being stored). If not, also list the other storage locations, size of tank and concentration of chemical being stored.	27) continued, Kevin Durrwachter. May require that you interview Dave Eisele.
Design basis earthquake frequency and intensity	28) continued Kevin Durrwachter
Earthquake frequency that would result in loss of structural integrity	29) continued Kevin Durrwachter
Other natural phenomena that would result in loss of structural integrity and their frequency	30) continued Kevin Durrwachter
Aircraft crash frequency	31) continued Kevin Durrwachter
<b>Deactivation and Decommissioning</b>	
General description of the D&D process and end state achieved after D&D	32) P.K. Hightower – assume that PuV processes will be removed at the end state of project need? Please confirm.

**Immobilization Facility Information Request**  
 (please provide numerical data in commonly reported units)

Information Requested	Response
<b>Immobilization Facility</b>	<b>Modification of K-Reactor Building for immobilization of up to 13 metric tons surplus plutonium using the glass can-in-canister approach</b>
<b>General</b>	
Schedule	<b>Source: Data Call Response – 10/4/07</b>
- Design	Design complete – 2009
- Construction or Modification	Construction complete – 2013
- Operation	Operations – 6 years ending in 2019
- Deactivation and decommissioning	Deactivation and Decommissioning – Begins 2019
Description of facility including:	Old K-Reactor Building
- Building number	1) Vernon O’Steen – can you provide a lat & longitude generally in front of KAC?
- Latitude and Longitude	2) Vernon O’Steen – do you have elevation capability?
- Elevation above NGVD (units)	3) Vernon O’Steen – do you have acreage/hectares assessment capability?
- Area (units)	4) Not applicable
- Plot plan	Data Call Response – 10/25/07, file “Vitrification System” and “Oxidation System”
- Floorplan with equipment arrangement	5) Bruce Hewett – is there a document/plan/description that we can provide SAIC?
- Features that prevent unauthorized entry (unclassified description)	<b>DOE Orders along with SRS 7Q Security Manual Procedures identify the Facility Security Requirements. Security &amp; Safeguard Features, to include DBT Upgrades, are controlled information.</b>
- Features that ensure safeguards against malevolent acts or material diversion by internal and external entities (unclassified description)	Data Call Response – 10/25/07, file “ICS and MCA”
- Fire protection systems	Data Call Response – 10/25/07, file “Fire Protection”
- Features that control releases of airborne contaminants (include diagram of treatment train)	Data Call Response – 10/25/07, file “Vitrification System” and “HVAC”
- Features that control releases of waterborne contaminants (include diagram of treatment train)	6) Greg Burbage – description to describe building sumps/pumps (Randy Sears)
- Features/procedures that prevent criticality	7) Kevin Durrwachter – please provide document/information that prevents KAC criticality.
- Description of liquid and non-liquid waste processing	Data Call Response – 10/25/07, file “Waste Management” and “Waste Study” (SK-DA-WM-0001)
<b>Construction/modification</b>	
Land disturbed for laydown (acres or hectares)	2 acres <b>Source: Data Call Response – 10/25/07, file “Site Work”</b>

Information Requested	Response
Description of activities conducted (e.g., decontamination/removal/disposal of existing facilities/equipment, land clearing, onsite concrete plant) and modifications needed (e.g., floors, walls, support beams, roof, waste management, ventilation, new roads)	Data Call Response – 10/4/07 & Data Call Response – 10/25/07, file “Waste Study” (SK-DA-WM-0001)
Describe type and quantity of air pollutant emitting equipment and frequency and duration of use.	Data Call Response – 10/25/07, file “Construction Equipment”
Describe type and quantity of noise producing equipment and frequency and duration of use.	Data Call Response – 10/25/07, file “Construction Equipment”
Emission release parameters – For any stack releases - release location (latitude & longitude), stack height, stack diameter, stack exhaust velocity or flow rate, exhaust air temperature – For fugitive releases - release location and dimensions of source area	8) Linda Nass – describe, if applicable/quantifiable, emissions released during CX/mod. phase of project? <i>A stack location or height has not been determined. A final determination has not been made. Emissions could go out the existing 105-K Reactor Main Stack or a new stack could be built or separate buildings could be built (each with their own stack/vent) outside of the 105-K Reactor Building. The operating 105-K Main Stack currently has a maximum airflow of 107,000 CFM. Stack height is 130 ft from ground level (75 ft above the structure) / Diameter of this stack is 16 ft / and exhaust air temperature is 78°F, exit velocity is 15 ft/sec. (The exit temperature could change with the introduction of the PuVit process depending upon which stack would be used. Air would need to be cooled prior to exiting the gloveboxes/Hepa filters.)</i>  9) Linda Nass – describe, if applicable/quantifiable, fugitive emissions during CX/mod. phase of project? <i>Fugitive emissions during the CX/mod phase of the project would be minimal. If seen, these would exit out the 105-K Reactor Main Stack (info provided above).</i>
Air emissions (point source and fugitive): - Criteria Pollutants (metric tons/yr) - HAPs (kilograms/yr) - Radioisotopes (curies/yr)	10) Linda Nass – are there any point source or fugitive source releases for criteria pollutants, HAPs, or radioisotopes during CX/mod. phase of the project? <i>None. If any, they would be in the noise range. Work on HX removal, Bingham pump removal, etc would be done in a containment hut so potential emissions would be minimal. At the most an increase of 10% over current stack emissions may be seen; current emissions from the 105-K Reactor Main Stack were 4.92E-04 mrem/yr for CY07 (or 3.51E-02 Ci) seen mostly as tritium.</i>
Liquid effluents - Location(s) of discharge(s) and copies of permit(s) - Rate(s) of discharge(s) (units/day) - Concentrations of contaminants (picocuries/liter or micrograms/liter)	11) Greg Burbage – describe liquid emissions (locations, permits, rates, concentrations, contaminants) created during CX/mod. phase of the project?
Employment for each year (FTEs)	12) John Hammond – do you have employment numbers for the CX/mod. phase of the project? <i>Maximum FTE’s (Year/FTE): FY09/99, FY10/151., FY11/119, FY12/0, FY13/0, FY14/182, FY15/330, FY16/307, FY17/340., FY18/210, FY19/241, FY20/169, FY21/179 &amp; FY22/76 Average FTE’s (Year/FTE): FY09/83, FY10/99., FY11/75, FY12/0, FY13/0, FY14/90, FY15/263, FY16/281, FY17/231., FY18/161, FY19/169, FY20/132, FY21/128 &amp; FY22/47</i>

Information Requested	Response																																																																																																		
Shifts	13) John Hammond – do you have shifts information for the CX/mod. phase of the project? <i>Day and night shifts will be required to achieve schedule completion dates.</i>																																																																																																		
Worker radiological exposure - total dose (person-rem)	14) Ben Morgan – is radiological exposure information during CX phase of the project available?																																																																																																		
Number of exposed workers	15) John Hammond – can you estimate a number of workers exposed for the CX/mod. phase of the project? <i>Average FTE's: FY09/83, FY10/99 (Note: The D&amp;R was scheduled during FY09 &amp; FY10. It is assumed that after D&amp;R is completed that the sources will be removed and the work areas will be rolled back. Therefore, no radiological exposure is expected after the D&amp;R phase is completed.</i>																																																																																																		
Utilities needed - Potable water (units/yr) - Non-potable water (units/yr) - Electricity (units) - Gasoline (units/yr) - Diesel Fuel (units/yr)	16) John Hammond – can you estimate in annual usage for the CX/mod. phase of the project of potable water, non-potable water, electricity, gasoline, and diesel fuel? (As provided by Rick Spaulding, CX Mngr). <table border="1" style="width: 100%; text-align: center; border-collapse: collapse;"> <thead> <tr> <th></th> <th>FY09</th> <th>FY10</th> <th>FY11</th> <th>FY12/13</th> <th>FY14</th> <th>FY15</th> <th>FY16</th> <th>FY17</th> <th>FY18</th> <th>FY19</th> <th>FY20</th> <th>FY21</th> <th>FY22</th> </tr> </thead> <tbody> <tr> <td><i>Pot Water (gal)</i></td> <td><i>0</i></td> <td><i>0</i></td> <td><i>0</i></td> <td><i>0</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>500</i></td> </tr> <tr> <td><i>Non-Pot (gal)</i></td> <td><i>0</i></td> <td><i>0</i></td> <td><i>0</i></td> <td><i>0</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> </tr> <tr> <td><i>Gas (gal)</i></td> <td><i>200</i></td> <td><i>200</i></td> <td><i>200</i></td> <td><i>0</i></td> <td><i>200</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>500</i></td> <td><i>300</i></td> <td><i>200</i></td> </tr> <tr> <td><i>Diesel (gal)</i></td> <td><i>400</i></td> <td><i>400</i></td> <td><i>400</i></td> <td><i>0</i></td> <td><i>400</i></td> <td><i>5000</i></td> <td><i>5000</i></td> <td><i>5000</i></td> <td><i>3000</i></td> <td><i>2000</i></td> <td><i>1000</i></td> <td><i>1000</i></td> <td><i>400</i></td> </tr> </tbody> </table> <p><i>NOTE: Minimal to no impact on existing electrical utilities during construction phase</i></p>		FY09	FY10	FY11	FY12/13	FY14	FY15	FY16	FY17	FY18	FY19	FY20	FY21	FY22	<i>Pot Water (gal)</i>	<i>0</i>	<i>0</i>	<i>0</i>	<i>0</i>	<i>500</i>	<i>Non-Pot (gal)</i>	<i>0</i>	<i>0</i>	<i>0</i>	<i>0</i>	<i>1000</i>	<i>Gas (gal)</i>	<i>200</i>	<i>200</i>	<i>200</i>	<i>0</i>	<i>200</i>	<i>1000</i>	<i>1000</i>	<i>1000</i>	<i>500</i>	<i>500</i>	<i>500</i>	<i>300</i>	<i>200</i>	<i>Diesel (gal)</i>	<i>400</i>	<i>400</i>	<i>400</i>	<i>0</i>	<i>400</i>	<i>5000</i>	<i>5000</i>	<i>5000</i>	<i>3000</i>	<i>2000</i>	<i>1000</i>	<i>1000</i>	<i>400</i>
