I would guess that most of the Construction would have been completed in the timeframe of 2010 to 2013, so spread over about three years.

Lee

Answer to 16b):

Below is my best guess (without going through all the drawings for the multitude of areas/equipment and calculating more exact volumes) for the D&R waste for the original 10 melter scope PuVit project. D&R would include at least all of -40, -20, Purification, -14, 186 Basin, 190 Bldg, 108-1, and 108-2. The volumes provided are, I believe, on the conservative (high) side. I gave total volumes as I do not remember the timeframe for D&R in order to calculate estimated volumes/year. This guess is not based upon any defensible, reproducible method, but given the little time to respond, it is the best I can do. If you need a more accurate estimate, I will need time to research more fully.

Let me know if you need anything else.

TRU: 0 m3 total
LLW: 2500 m3 total
MW: 100 m3 total
Hazardous: 100 m3 total
Non-Hazardous (Clean): 2500 m3 total

Thanks

Betsy

Subject Updated PuD Immobilization Data Call Response:

Barry,

Attached is the updated PuD Immobilization data call response. You may wish to provide this information to SAIC, or wait until Monday, at which time I believe our response will be complete. If you have any questions, please give me a call. Thanks.
