CHRON (M8e)

U.S. Spent Fuel Team, Saturday 1/27/96

To: Cherie Fitzgerald U.S. Department of Energy, NM 42

1/29/96

At about 9:30 AM Doug and I left the site and traveled to the Hotel Koryo in P'yongyang to meet with the IAEA. We met Director Perriots and his team at the conclusion of his morning meetings with his DPRK safeguards counterparts. Over lunch they described three safeguards related items: modifications to the fuel storage racks, the gamma-ray collimator assembly, and the fuel rod scale. For the rack modifications, drawings were provided by the IAEA which show the locations of 44 pins. These pins will extend through holes to be cut into the bottom of the "outside" storage rack locations. The desired locations are inside the canister base rings as close to the center locking pins as possible. More details will be included in tomorrow's fax, and I will include sketches after discussion with the Chief Engineer.
