Instructions Attachment L-2b:

Note: Attachment L-2b is limited to one (1) 8 ½ x 11 page.

Experiences provided must be relevant to the work that the team member will be performing under this contract. The Offeror shall explain how the work performed by the experience is relevant to the indicator. Relevance is defined by Indicator as follows:

- A. Relevance to indicator A. is defined as management of international projects with project size of \$1M to \$25M per project, on sites that are not owned or operated by the U.S. Government (such as U.S. Embassies or military bases) or by the host country beneficiary entity **for which the work is being performed; for example, if the work is being performed on behalf of the Host Country's Customs Service, and the site is owned or operated by the Host Country's Border Guard, then this project would be relevant.** More relevant sites have multiple public and/or private stakeholders; lack infrastructure; require accommodating ongoing site operations, have changing requirements, and cultural and language-related barriers.
- B. Relevance to indicator B. is defined as solicitation and management of foreign subcontracts for construction with value of \$150K to \$15M per project. More relevant experience shows management of subcontracts in regions where subcontractor quality management, safety practices, capability, and resources are limited.
- C. Relevance to indicator C. is defined as management and logistics for simultaneous deployment of design, construction, or IT systems where the total value of multiple deployments is \$50M to \$200M. More relevant experience includes simultaneous deployments of design, construction, and IT systems to multiple locations and countries.
- D. Relevance to indicator D. is defined as provision, installation, integration, testing and troubleshooting of CAS software that has passed Second Line of Defense [also known as Nuclear Smuggling Detection and Deterence (NSDD)] CONUS Core level testing or been evaluated and approved for the NSDD installations.
