### About The University of Texas System

Educating students, providing care for patients, conducting groundbreaking basic, applied and clinical research, and serving the needs of Texans and the nation for more than 130 years, The University of Texas System is one of the largest public university systems in the United States. With 14 institutions and an enrollment of more than 217,000 students, The University of Texas System confers more than one-third of the state's undergraduate degrees, educates almost two-thirds of the state's health care professionals annually and accounts for a majority of all research funds awarded to public institutions in Texas. The UT System has an annual operating budget of \$16.9 billion (FY 2016) including \$3 billion in sponsored programs funded by federal, state, local and private sources. With about 20,000 faculty – including Nobel laureates – and more than 70,000 health care professionals, researchers, student advisors and support staff, the UT System is one of the largest employers in the state.

The University of Texas System has a long-standing relationship with Sandia National Laboratory, providing research, advice, and educational opportunities to support Sandia National Laboratory and its mission. The University of Texas at Austin has maintained particularly strong research ties in subject areas such as computational simulation of complex systems or components.

2. The University of Texas System welcomes the opportunity to demonstrate the ways in which the University can support mission-critical advances for Sandia National Laboratory.

3. The University of Texas System grants permission to publish this information on the NNSA's SNL M&O Contract Competition website.
