The reason for the high figure is due to the backburn that was set btwn TA 49 and Bandelier. A small portion of LANL is on the Bandeleir sde of NM 4.

I have a question and need to talk to someone knowledgeable about the Las Conchas fire.

One of the Santa Fe National Forest Incident website, they have a table showing how much land of managed by different entities was burned. For DOE it lists 118 acres. I am trying to find an explanation since the story so far has been 1 acre. Is there a noncontiguous patch of land that was burned?

KO
